**Product Name** : KCTD3 Rabbit pAb**Cat.No.:** db8918**Synonyms** : NY-REN-45**Application** : WB**Reactivity** : Human**Host species** : Rabbit**Background**

This gene encodes a member of the potassium channel tetramerization-domain containing (KCTD) protein family. Members of this protein family regulate the biophysical characteristics of ion channels. In mouse, this protein interacts with hyperpolarization-activated cyclic nucleotide-gated channel complex 3 and enhances its cell surface expression and current density. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Feb 2016]
