Product Name : Phospho-IRF3 (Ser386) Rabbit pAb**Cat.No.:** db2096**Synonyms** : IIAE7**Application** : WB**Reactivity** : Human**Host species** : Rabbit**Background**

This gene encodes a member of the interferon regulatory transcription factor (IRF) family. The encoded protein is found in an inactive cytoplasmic form that upon serine/threonine phosphorylation forms a complex with CREBBP. This complex translocates to the nucleus and activates the transcription of interferons alpha and beta, as well as other interferon-induced genes. Alternatively spliced transcript variants encoding multiple isoforms have been observed for this gene. [provided by RefSeq, Nov 2011]
