Product Name : Phospho-elF4EBP1 (Thr70) Rabbit pAb Cat.No.: db8982 Synonyms: BP-1; 4EBP1; 4E-BP1; PHAS-I Application : WB, IHC Reactivity : Human Host species : Rabbit

Background	This gene encodes one member of a family of translation repressor proteins.	The protein directly
	interacts with eukaryotic translation initiation factor 4E (eIF4E), which is a limi	ting component of the
	multisubunit complex that recruits 40S ribosomal subunits to the 5' end of mRI	NAs. Interaction of
	this protein with eIF4E inhibits complex assembly and represses translation. T	This protein is
	phosphorylated in response to various signals including UV irradiation and ins	sulin signaling,
	resulting in its dissociation from eIF4E and activation of mRNA translation. [pr	ovided by RefSeq,
