Product Name: TriMethyl-Histone H3 (Lys36) (7G6) Mouse mAb

Cat.No.: db6503

Synonyms: H3K36me3; H3 histone; HIST1H3A; Histone cluster 1; H3a

**Application:** WB

Reactivity: Human, Mouse, Rat

Host species: Mouse

Background Core component of nucleosome. Nucleosomes wrap and compact DNA into chromatin, limiting

DNA accessibility to the cellular machineries which require DNA as a template. Histones thereby play a central role in transcription regulation, DNA repair, DNA replication and chromosomal stability. DNA accessibility is regulated via a complex set of post-translational modifications of histones, also called histone code, and nucleosome remodeling. Miscellaneous This histone is only

present in mammals and is enriched in acetylation of Lys-15 and dimethylation of Lys-10

(H3K9me2).
