Product Name : CD34 (BP6047) Rabbit mAb**Cat.No.:** db30037**Synonyms :** Hematopoietic progenitor cell antigen CD34**Application :** IHC, WB, FC**Reactivity :** Human**Host species :** Rabbit**Background**

CD34 (also named myeloid progenitor cell antigen) is a heavily glycosylated type I transmembrane protein. There are two forms of the CD34 protein, resulting from alternative splicing. The functions of CD34 is largely unknown, but recent evidence suggests a role for CD34 in cell adhesion and inhibition of hematopoiesis. It is suggested that CD34 is a signalling molecule involved in maintenance of a phenotypically plastic state in undifferentiated cells.
