Myeloid differentiation factor 88 (MYD88), a primary differentiation response gene in Myeloid precursors, was discovered in 1990s. MYD88 is a universal connexin containing three main structures: N-terminal death domain (DD), intermediate connexin domain (ID), and C-terminal Toll/interleukin-1 receptor domain (TIR). After ligand binding, the cytoplasmic TIR domain of toll-like receptor (TLR) or IL1R binds to TIR of MYD88.
