Background The protein encoded by this gene is part of a complex of proteins that constitute adherens junctions

(AJs). AJs are necessary for the creation and maintenance of epithelial cell layers by regulating cell growth and adhesion between cells. The encoded protein also anchors the actin cytoskeleton and may be responsible for transmitting the contact inhibition signal that causes cells to stop dividing once the epithelial sheet is complete. Finally, this protein binds to the product of the APC gene, which is mutated in adenomatous polyposis of the colon. Mutations in this gene are a cause of colorectal cancer (CRC), pilomatrixoma (PTR), medulloblastoma (MDB), and ovarian cancer. Alternative splicing results in multiple transcript variants. Western blot analysis of extracts from C6,CHO-KI,HeLa cells using db13925 at 1:1000.

Immunohistochemical analysis of paraffin-embedded human Cholangiocarcinoma using db13925 antibody.

Western blot analysis of extracts from Mouse spleen tissue using db13925 at 1:1000.

Immunofluorescence analysis of HeLa cells labelling beta Catenin with db13925.

The cells were fixed with cold 100% methanol (10min, 4° C) and blocked in 1% BSA/10% normal goat serum/0.3M glycine in 0.1% PBS-Tween 20 for 1h. The cells were then incubate with db13925 (1:100) at room temperature for 1h, followed by a further incubation at room temperature for 45min with Goat Anti Rabbit lgG (H+L)-AF488 (db10005, shown in green). Nuclear DNA was labeled in blue with DAPI.

Control: Secondary antibody only.
