Product Name: c-Rel (DGR34046) Rabbit mAb

Cat.No.: db11501 Synonyms: C-Rel Application: WB, IP Reactivity: Human Host species: Rabbit

Background This gene encodes a protein that belongs to the Rel homology domain/immunoglobulin-like fold,

plexin, transcription factor (RHD/IPT) family. Members of this family regulate genes involved in apoptosis, inflammation, the immune response, and oncogenic processes. This proto-oncogene plays a role in the survival and proliferation of B lymphocytes. Mutation or amplification of this gene

is associated with B-cell lymphomas, including Hodgkin's lymphoma. Single nucleotide

polymorphisms in this gene are associated with susceptibility to ulcerative colitis and rheumatoid

arthritis. Alternative splicing results in multiple transcript variants encoding different isoforms.
