Product Name : MonoMethyl-Histone H4 (Lys31) Rabbit pAb**Cat.No.:** db764**Application** : WB, ICC/IF**Reactivity** : Human**Host species** : Rabbit**Background**

Core component of nucleosome. Nucleosomes wrap and compact DNA into chromatin, limiting DNA accessibility to the cellular machineries which require DNA as a template. Histones thereby play a central role in transcription regulation, DNA repair, DNA replication and chromosomal stability. DNA accessibility is regulated via a complex set of post-translational modifications of histones, also called histone code, and nucleosome remodeling.
