Product Name : MonoMethyl-Histone H3 (Lys36) (DGR19374) Rabbit mAb**Cat.No.:** db12208**Synonyms :** H3/A; H3FA**Application :** WB, ICC/IF**Reactivity :** Human,Mouse**Host species :** Rabbit**Background**

Core component of nucleosome. Nucleosomes wrap and compact DNA into chromatin, limiting DNA accessibility to the cellular machineries which require DNA as a template. Histones thereby play a central role in transcription regulation, DNA repair, DNA replication and chromosomal stability. DNA accessibility is regulated via a complex set of post-translational modifications of histones, also called histone code, and nucleosome remodeling.
