**Product Name** : DiMethyl-Histone H3 (Lys56) (DGR33460) Rabbit mAb**Cat.No.:** db12216**Synonyms** : H3/A; H3FA**Application** : WB, ICC/IF**Reactivity** : Human,Mouse**Host species** : Rabbit**Background**

Core component of nucleosome. Nucleosomes wrap and compact DNA into chromatin, limiting DNA accessibility to the cellular machineries which require DNA as a template. Histones thereby play a central role in transcription regulation, DNA repair, DNA replication and chromosomal stability. DNA accessibility is regulated via a complex set of post-translational modifications of histones, also called histone code, and nucleosome remodeling.
