**Product Name** : Phospho-IKB alpha (Tyr42) (DGR32971) Rabbit mAb**Cat.No.:** db12645**Synonyms** : IKBA; MAD-3; NFKB1; EDAID2**Application** : WB**Reactivity** : Human**Host species** : Rabbit**Background**

This gene encodes a member of the NF-kappa-B inhibitor family, which contain multiple ankrin repeat domains. The encoded protein interacts with REL dimers to inhibit NF-kappa-B/REL complexes which are involved in inflammatory responses. The encoded protein moves between the cytoplasm and the nucleus via a nuclear localization signal and CRM1-mediated nuclear export. Mutations in this gene have been found in ectodermal dysplasia anhidrotic with T-cell immunodeficiency autosomal dominant disease. [provided by RefSeq, Aug 2011]
