Host species : Rabbit

**Background** This gene encodes a cell adhesion protein which is a member of the immunoglobulin superfamily.

The encoded protein is involved in cell-to-cell interactions as well as cell-matrix interactions during

development and differentiation. The encoded protein has been shown to be involved in

development of the nervous system, and for cells involved in the expansion of T cells and dendritic cells which play an important role in immune surveillance. Alternative splicing results in multiple

transcript variants. [provided by RefSeq, Jun 2011]
