Host species: Rabbit

BackgroundThis gene encodes a member of the small leucine-rich proteoglycan (SLRP) family that includes

decorin, biglycan, fibromodulin, keratocan, epiphycan, and osteoglycin. In these bifunctional

molecules, the protein moiety binds collagen fibrils and the highly charged hydrophilic glycosaminoglycans regulate interfibrillar spacings. Lumican is the major keratan sulfate

proteoglycan of the cornea but is also distributed in interstitial collagenous matrices throughout the

body. Lumican may regulate collagen fibril organization and circumferential growth, corneal transparency, and epithelial cell migration and tissue repair. [provided by RefSeq, Jul 2008]
