**Background** This gene encodes a member of the IAP family of proteins that inhibit apoptosis by binding to

tumor necrosis factor receptor-associated factors TRAF1 and TRAF2, probably by interfering with

activation of ICE-like proteases. The encoded protein inhibits apoptosis induced by serum

deprivation but does not affect apoptosis resulting from exposure to menadione, a potent inducer of free radicals. It contains 3 baculovirus IAP repeats and a ring finger domain. Transcript variants

encoding the same isoform have been identified. [provided by RefSeq, Aug 2011]
