Product Name : BRMS1 (DGR36041) Rabbit mAb**Cat.No.:** db16276**Synonyms :** Breast cancer metastasis-suppressor 1**Application :** WB, IHC-P, ICC/IF, IP**Reactivity :** Human**Host species :** Rabbit**Background**

This gene reduces the metastatic potential, but not the tumorigenicity, of human breast cancer and melanoma cell lines. The protein encoded by this gene localizes primarily to the nucleus and is a component of the mSin3a family of histone deacetylase complexes (HDAC). The protein contains two coiled-coil motifs and several imperfect leucine zipper motifs. Alternative splicing results in two transcript variants encoding different isoforms.
