Product Name : CRABP1 (DGR36075) Rabbit mAb**Cat.No.:** db16310**Synonyms :** RBP5; CRABP; CRABPI; CRABP-I**Application :** WB, IP**Reactivity :** Human, Mouse**Host species :** Rabbit**Background**

This gene encodes a specific binding protein for a vitamin A family member and is thought to play an important role in retinoic acid-mediated differentiation and proliferation processes. It is structurally similar to the cellular retinol-binding proteins, but binds only retinoic acid at specific sites within the nucleus, which may contribute to vitamin A-directed differentiation in epithelial tissue.
