

## NF-κB p65 (5A10) Mouse mAb (PBS Only)

db6428-PBS

Package : 可询价

**Product Name** : NF-κB p65 (5A10) Mouse mAb (PBS Only)**Cat.No.:** db6428-PBS**Synonyms** : NFKB3; RELA; TF65; Transcription factor p65; p65; NFκB**Application** : WB, IHC-P, IP**Reactivity** : Human, Mouse, Rat**Host species** : Mouse**Background**

NF-κappa-B is a pleiotropic transcription factor present in almost all cell types and is the endpoint of a series of signal transduction events that are initiated by a vast array of stimuli related to many biological processes such as inflammation, immunity, differentiation, cell growth, tumorigenesis and apoptosis. NF-κappa-B is a homo- or heterodimeric complex formed by the Rel-like domain-containing proteins RELA/p65, RELB, NFKB1/p105, NFKB1/p50, REL and NFKB2/p52 and the heterodimeric p65-p50 complex appears to be most abundant one. The dimers bind at kappa-B sites in the DNA of their target genes and the individual dimers have distinct preferences for different kappa-B sites that they can bind with distinguishable affinity and specificity. Different dimer combinations act as transcriptional activators or repressors, respectively. NF-κappa-B is controlled by various mechanisms of post-translational modification and subcellular compartmentalization as well as by interactions with other cofactors or corepressors. NF-κappa-B complexes are held in the cytoplasm in an inactive state complexed with members of the NF-κappa-B inhibitor (Iκappa-B) family. In a conventional activation pathway, Iκappa-B is phosphorylated by Iκappa-B kinases (IKKs) in response to different activators, subsequently degraded thus liberating the active NF-κappa-B complex which translocates to the nucleus. NF-κappa-B heterodimeric p65-p50 and p65-c-Rel complexes are transcriptional activators. The NF-κappa-B p65-p65 complex appears to be involved in invasion-mediated activation of IL-8 expression. The inhibitory effect of Iκappa-B upon NF-κappa-B in the cytoplasm is exerted primarily through the interaction with p65. p65 shows a weak DNA-binding site which could contribute directly to DNA binding in the NF-κappa-B complex. Associates with chromatin at the NF-κappa-B promoter region via association with DDX1. Essential for cytokine gene expression in T-cells (PubMed/15790681).

**Immunogen**

Synthetic Peptide of NFκB p65

**Gene ID**

5970

**Swiss Prot**

Q04206

**Synonyms**

NFKB3; RELA; TF65; Transcription factor p65; p65; NFκB

Reactivity	Human, Mouse, Rat
Application	WB, IHC-P, IP
Calculated MW	65 kDa
Observed MW	65 kDa
Host species	Mouse
Clonality	Monoclonal
Clonality No.	5A10-1F10-1D8
Isotype	IgG1
Purity	Affinity Purification
Conjugation	Un-conjugated
Concentration	1 mg/mL
Formulation	PBS Only
Storage Stability	Store at -20°C. Recommended to aliquot into single-use vials. Supplied in 1X PBS (pH 7.4). BSA and Azide Free. Stable for 12 months from date of receipt.

Western blot analysis of NFκB p65 in Jurkat, MCF-7, SKBR3, Hela and 3T3 lysates using NFκB p65 antibody.

Immunoprecipitation analysis of NF-KB p65 in Hela lysates using NF-KB p65 (5A10) antibody

Immunohistochemistry analysis of paraffin-embedded mouse hippocampus using NFκB p65 antibody. High-pressure and temperature Sodium Citrate pH 6.0 was used for antigen retrieval.

Western blot analysis of NF-KB p65 (5A10) in CHO-K1, rat brain, C6, 3T3, Hela lysates using NF-KB p65 (5A10) antibody
