This gene encodes a member of the cysteine proteases that plays important roles in apoptosis, cell migration and the inflammatory response. The encoded protein mediates production of pro-inflammatory cytokines by macrophages upon bacterial infection. Mice lacking the encoded protein are resistant to endotoxic shock induced by lipopolysaccharide. A 5-bp deletion encompassing a splice acceptor junction resulting in alternate splicing and a shorter non-functional isoform in certain mouse strains has been described. Although its official nomenclature is "caspase 4, apoptosis-related cysteine peptidase", this gene and its encoded protein have historically been called caspase 11. This gene is present in a cluster of three caspase genes on chromosome 9. [provided by RefSeq, Apr 2015]

**Immunogen**

Recombinant protein of mouse Caspase-11

**Gene ID**

12363

**Swiss Prot**

P70343

**Synonyms**

Casp1; ich-3; CASP-4; Casp11; CASP-11

**Reactivity**

Mouse

**Application**

WB, IP

**Recommended dilution**

WB: 1:1000

IP: 1:20

**Calculated MW**

43 kDa

**Observed MW**

43,38,25 kDa

**Host species**

Rabbit

**Clonality**

Polyclonal

**Isotype**

IgG
