Background This gene was identified as a gene whose expression is rapidly induced by the tumor necrosis

factor (TNF). The protein encoded by this gene is a zinc finger protein and ubiqitin-editing enzyme, and has been shown to inhibit NF-kappa B activation as well as TNF-mediated apoptosis. The encoded protein, which has both ubiquitin ligase and deubiquitinase activities, is involved in the cytokine-mediated immune and inflammatory responses. Several transcript variants encoding the

same protein have been found for this gene. [provided by RefSeq, Jul 2012]
