Background	Phosphoinositide 3-kinases (PI3Ks) phosphorylate inositol lipids and are invo response. The protein encoded by this gene is a class I catalytic subunit of PK catalytic subunits (p110-alpha p110-beta, and p110-delta), the encoded prote regulatory subunit to form PI3K. This gene is located in a commonly deleted so chromosome 7 previously identified in myeloid leukemias. Several transcript same protein have been found for this gene.
